Snowflake Developer

KALYAN REDDY POLADI **Mobile: +91- 8801616021**

Email: kalyanreddypoladi021@gmail.com

SUMMARY:

- Having 3.4 years of IT experience in Snowflake cloud database, AWS, DBT and Informatica Data Integration with Technical and Functional Experience in developing and maintaining data warehouses/marts. Proficiency in Data warehousing, ETL process, OLAP systems.
- Have good Knowledge in ETL and hands on experience in ETL tools Informatica.
- Expertise in Data modelling techniques like Data Modelling- Dimensional/ Star Schema and Snowflakemodelling, Slowly Changing Dimensions (SCD Type 1, Type 2, and Type 3).
- Self-Starter and Team Player with excellent communication, organizational and interpersonal skills withthe ability to grasp things quickly.
- Designing and implementing data warehousing solutions using Snowflake and DBT, ensuring efficientdata transformation and modelling processes.
- Designed and automated data ingestion processes into Snowflake using DBT.
- Developed DBT models, materializations, and seed concepts within the DBT development IDE.
- Maintained and enhanced DBT models to transform raw data into structured datasets for analyticalpurposes.
- Designed and developed DBT models aligned with specific business requirements and objectives.
- My expertise extends to working with AWS S3 and Snowpipe for developing efficient data pipelines inSnowflake, including bulk loading and unloading data using the COPY command for large data files sourced from platforms like AWS S3 and Azure blob storage, including various file types such as CSV and JSON.
- Implemented incremental models within DBT to optimize data processing efficiency.
- Experience with Snowflake Virtual Warehouses.
- Experience in building Snowpipe.
- Knowledge of Data Sharing in Snowflake.
- Knowledge of. Snowflake Database, Schema and Table structures.
- Experience in using Snowflake Clone and Time Travel.
- In - depth understanding of Snowflake cloud technology.
- In-Depth understanding of Snowflake Multi-cluster Size and Credit Usage
- Played key role in Migrating Informatica objects into Snowflake environment.
- Experience with Snowflake Multi-Cluster Warehouses.
- Basic knowledge of Power BI for building reports and dashboards on top of Snowflake data.

EDUCATION:

- MSc in Data Science from Cardiff Metropolitan University, UK in the year 2023.
- B-Tech in Computer Science from SR University, India in the year 2019.

TECHNICAL SKILLS:

Cloud Platform	**AWS(S3, Lambda)**
Cloud Datawarehouse	**Snowflake (virtual and multi-cluster warehouses, stages, COPY, Snowpipe, Time Travel, cloning, data sharing, query tuning)**
ETL Tools	**DBT (models, incremental models, macros, seeds, tests), Informatica**
Data Modelling	**Dimensional modelling, Star and Snowflake schema, SCD Type 1 and Type 2**
Databases	**Snowflake, SQL Server and Oracle**
Operating Systems	**Windows and Unix/Linux**
Supporting Tools	**Toad, Putty, WinSCP, SQL developer, Jira and GIT.**
Languages	**SQL, Unixshell and Python**
BI Tools	**Power BI (basic knowledge)**

PROFESSIONAL EXPERIENCE:

- Working for **Course5i** from July 2023 to Till Date.

PROJECTS HANDLED:

Project 1:

Title	DATA-D&A-FDS Program
Client	CISCO
Role	Snowflake Developer
Environment	Snowflake and DBT

Description:

This is an Enterprise data warehouse that loads the data from various sources of systems with various technologies like Teradata, HANA, Informatica, Snowflake, Big Query etc. This system loads the data,Transform/Clean it, and sends the processed data for various downstream systems.

Responsibilities:

- Create Change Requests – Enhancements, Structural changes and scheduling changes propagation fromdifferent source systems to Snowflake.
- Support Go Live/Release of applications – To deploy the changes in Snowflake.

- Service Requests – working closely with users for incident resolution within the service level
  agreements and providing short term fixes and long-term fixes with performing the root cause analysis.
- Developed and maintained DBT models, including incremental and full load models, macros, andconducted testing using SQL.
- Analysed Snowflake queries to optimize performance and enhance efficiency.
- Loading data into snowflake tables from internal stage and on local machine.
- Created data sharing out of snowflake with testing team.
- Involved in unit testing and Integration Testing.
- Developed DBT views tailored for reporting purposes to support decision-making processes.
- Utilized DBT models and jobs extensively for efficient data transformation and modelling processes, including thecreation and maintenance of DBT models, macros, and testing using SQL.
- Preparing Unit Test Document.

Project 2:

Title	Arrow Electronics
Client	Arrow Electronics (US)
Role	ETL Developer/Production Support
Environment	Informatica, SQL, Windows and Unix

Description:

Arrow's incredibly broad portfolio brings a unique vantage over the entire technology landscape to every conversation with every customer as we help them design, source, build and launch products that improve thequality of life for people around the world and make the benefits of innovation more accessible to all.

Responsibilities:

- Participated in all phases of development life-cycle with extensive involvement in the definition anddesign meetings, functional and technical walkthroughs.
- Created Informatica jobs to copy the files from one server to another and utilized Informatica FTP components
- Created and managed Source to Target mapping documents for all Facts and Dimension tables
- Used ETL methodologies and best practices to create Informatica ETL jobs. Followed and enhancedprogramming and naming standards.
- Design and Implemented ETL for data load from heterogeneous Sources to SQL Server and Oracle astarget databases and for Fact and Slowly Changing Dimensions SCD-Type1 and SCD-Type2.
- Extensively used mapping component which does lookup & Joiner Functions, expression, Lookup, Joiner, Router, Filter, Sorter, Sequence Generator, Normalizer transformations etc. in many of my Jobs Created and worked on over100+components to use in my jobs.

- Very good knowledge in Snowflake.
- Very good knowledge in AWS S3 and LAMBDA functions.
- We have used Snowpipe for continuous data load
- For fixing the issues use snowflake time travel and worked on clone and bulk loads.
- Worked on data sharing.
- Worked with both Maximized and Auto-scale functionality.
- Used Temporary and Transient tables on diff datasets.
- Cloned Production data for code modifications and testing.
- Shared sample data using grant access to customer for UAT.
- Time travelled to 56 days to recover missed data.
